jue26323-tech.github.io/resume

Logistics Engineering student (CAFUC, 2027) with hands-on supply-chain internships at JD.com and a trading company, plus a full-stack AI companion app built and run solo. I connect operations data with AI workflows, communicate clearly in writing, and deliver independently.

EDUCATION

Civil Aviation Flight University of China 2023.09 – 2027.06

B.Eng., Logistics Engineering and Management

- Core courses: Supply Chain Management, Logistics Project Management, Logistics Systems Engineering, Principles of Logistics, Logistics System Planning and Design.
- Certifications: CET-4, Assistant Logistics Specialist, Kingdee Junior Supply Chain Implementation Consultant.

INTERNSHIP EXPERIENCE

Supply Chain Incident Handling Intern · JD.com 2026.06 – 2026.09

- **Closed-loop handling:** ran the full SOPs for damage and error cases; traced root causes with warehousing & distribution, customer service and QA, then coordinated claims/reissues — **813 cases handled, 804 closed (98.89% closure)**.
- **Data review:** built a ledger classifying exceptions (transport damage, packaging defects, system error) with weekly root-cause reports, driving packaging-standard changes that **cut repeat transport damage by 15%**.
- **Collaboration:** fast response and precise handling cut average handling time **4.3 → 3.1 days**; built the department's exception dashboard to guide frontline process fixes and protect last-mile quality.

Operations Assistant · Xinjuxin Trading Co., Ltd. 2025.01 – 2025.04

- **Purchasing:** ran inquiry, price comparison and ordering directly with upstream suppliers — **60+ POs, 98% on-time arrival**.
- **Inventory counts:** weekly full counts, an Excel variance tracker and replenishment from 3-month sales trends — **turnover 32 → 24 days**.
- **Clearance:** kept the purchase–sales–inventory ledger, used ABC analysis to flag slow movers and planned promotions with sales — **shrinkage 5.6% → 2.9%**, slow-moving share **−42%**.

PROJECT

Xiao-Home · AIGC Companion App (solo, full-stack) 2026 – present

- Designed, built and operate a web app, Node.js/Express backend and native Android app (~26k lines, 260+ commits), iterating daily from user feedback.
- LLM engineering: multi-provider models (Claude / Gemini), streaming, prompt caching, low-cost model routing; long-term memory with vector search, emotion weighting and versioned restore.
- Agent tooling via MCP with step logs and resume-after-restart; voice, image/long-screenshot understanding and procedural illustration.

ACADEMIC COMPETITIONS

- **Logistics Design (3rd prize):** for inefficient community last-mile delivery, built 3 integrated siting–routing–autonomous-delivery models on field data; hybrid GA–PSO cut nodes 31 → 6, shortest TSP path 31.02, 93.99% optimisation success rate.
- **CRA Market Research (1st in university, 2nd provincial):** consumer-preference study — questionnaire, data cleaning, SPSS modelling on 100 valid responses; co-wrote a 19-page business report with data-driven recommendations.
- **Transport Technology (2nd prize):** Matlab + CarSim co-simulation for lane keeping, pedestrian avoidance, unsignalised intersections and traffic-light recognition with HIL; 0.586 s pedestrian stop at 30 km/h, 120 km/h hazard detection, FPQN + CVaR for occlusion and uncertainty.

SKILLS

Data	Excel, SQL, Python, Power BI, SPSS, Matlab
Systems	WMS (JD.com), ERP (Kingdee), SAP (basics); procurement full-process SOP & flowcharts
AI	LLM apps, prompt engineering, RAG/embeddings, agents & MCP, AI-assisted analysis; React, Node.js
Languages	Mandarin (native), English (CET-4)
