jue26323-tech.github.io/resume

Logistics Engineering student (CAFUC, 2027) with hands-on supply-chain internships at JD.com and a trading company, plus a full-stack AI companion app built and run solo. I connect operations data with AI workflows, communicate clearly in writing, and deliver independently.

EDUCATION

Civil Aviation Flight University of China 2023.09 – 2027.06
B.Eng., Logistics Engineering and Management

- Core courses: Supply Chain Management, Logistics Project Management, Logistics Systems Engineering, Principles of Logistics, Logistics System Planning and Design.
- Certifications: CET-4, Assistant Logistics Specialist, Kingdee Junior Supply Chain Implementation Consultant.

INTERNSHIP EXPERIENCE

Supply Chain Incident Handling Intern · JD.com 2026.06 – 2026.09

- Reduced average anomaly resolution time from **4.3 to 3.1 days (28%)** via root-cause analysis and coordination with warehouse, customer service and QA.
- Built a departmental anomaly dashboard integrating upstream transport standards to secure downstream loading quality.
- Managed **813 incident cases end-to-end at a 98.89% closure rate**; executed full SOPs for damage and error handling, claims and reissues.
- Created a classification ledger and weekly reports for abnormal orders, driving packaging improvements that **cut similar transport damage by 15%**.

Purchasing Intern · Xinjuxin Trading Co., Ltd. 2025.01 – 2025.04

- Handled supplier selection, price benchmarking and ordering; **60+ POs at 97.86% on-time delivery**.
- Weekly physical counts, Excel variance tracking and replenishment from 3-month rolling sales — **turnover days 32 → 24**.
- ABC classification and targeted clearance — **shrinkage 5.6% → 2.9%**, slow-moving share **−42%**.

PROJECT

Xiao-Home · AIGC Companion App (solo, full-stack) 2026 – present

- Designed, built and operate a web app, Node.js/Express backend and native Android app (~26k lines, 260+ commits), iterating daily from user feedback.
- LLM engineering: multi-provider models (Claude / Gemini), streaming, prompt caching, low-cost model routing; long-term memory with vector search, emotion weighting and versioned restore.
- Agent tooling via MCP with step logs and resume-after-restart; voice, image/long-screenshot understanding and procedural illustration.

ACADEMIC COMPETITIONS

- **Logistics Design (3rd prize):** hybrid GA–PSO optimised nodes/routes — nodes 31 → 6, TSP 31.02 (93.99% gain).
- **Market Research (1st in university, 2nd provincial):** full cycle — questionnaire, cleaning, SPSS; 100 responses, 19-page report + strategy.

- **Transport Technology (2nd prize):** Matlab/CarSim control algorithms (lane keeping, collision avoidance, intersection) with HIL verification.

SKILLS

Data	Excel, SQL, Python, Power BI, SPSS, Matlab
Systems	WMS (JD.com), ERP (Kingdee), SAP (basics); procurement full-process SOP & flowcharts
AI	LLM apps, prompt engineering, RAG/embeddings, agents & MCP, AI-assisted analysis; React, Node.js
Languages	Mandarin (native), English (CET-4)
